

Microsoft's Return to the Workplace Solution

Is your organisation looking to get employees back to their normal place of work? Re-open your workplaces safely with DXC Technology and Microsoft.

Get your employees back to the workplace safely and confidently

Microsoft's Return to the Workplace solution can help you create a safer workplace. Re-open your workplaces responsibly, monitor them effectively and most importantly, protect your employees:

- **Facilities managers** – can safely re-open work locations by making informed decisions based on the latest available information
- **Employees** – can return confidently, using self-service tools that allow them to work safely and productively
- **Health & Safety managers** – can help ensure the well-being of all your employees.

Solution Overview

Microsoft's Return to the Workplace solution makes use of Power Apps and Power BI, two of Microsoft's Power Platform solutions. It is made up of four key applications:

- **Location Readiness dashboard** – helps determine the readiness of the facilities under your control and efficiently manage their safe re-opening. Facilities leaders or 'return to work' taskforces can use the Location Readiness dashboard to quickly make informed decisions using critical information, such as COVID-19 infection rates and supplies availability.
- **Facility Safety Management** – provides facilities managers with the tools to ensure that they are providing a safe work environment for employees to return to.

Key Benefits

- Quickly determine the readiness of different locations and effectively manage their readiness using critical data.
- Execute against readiness factors, determine when to advance or retreat phases, and monitor daily employee activity
- Keep employees safe and productive with self-service tools that allow them to check-in remotely and self-screen before entering locations.
- Actively manage COVID-19 cases, identify hotspots for safety improvement and investigate exposures.

It helps them to effectively prepare and manage the re-opening of their business locations.

Employee Return to the Workplace – allows your workforce to check-in remotely and self-screen before they ever step foot into any of your locations. This self-service tool helps give employees the tools they need to return with confidence and be productive.

- **Workplace Care Management** – gives those responsible for health and safety leaders the tools they need. Actively manage COVID-19 cases, identify hot spots for safety improvement, and import data from contact tracing systems to determine exposure. Using the Workplace Care Management dashboard, they can monitor all of the data from the Workplace Care Management app.

Key Features

Location Readiness Dashboard

- System at a Glance tab - provides key metrics for returning to work, including current value, goal values, and whether locations have met the goals. Regional filters can be applied
- Facility at a Glance tab - lets you drill down to each facility and track details about open readiness, employee sentiment and attestation to determine a facility's opening phase
- Employee Activity tab - provides an overall time-series daily view for employee sentiment and attestation. You can check every day to see where numbers increased or were lower compared to previous days.

Facility Safety Management App

- For Facility Management – list of the facilities that require monitoring to re-open, with the ability to group by geography and by type (e.g. building, parking, etc.)
- Re-open Readiness - phase transitions are used to create a request to transition to a new phase of re-opening
- Employee information – track self-reported employee sentiment, health assessments or attestations, bookings and visits.

Employee Return to the Workplace App

- Book a facility day pass – chose a space, check-in and pass a daily health check to get a day pass for a specific facility
- Look up facility status - view details such as whether the facility is open and what phase of re-opening it's in
- Employee sentiment - share how you're feeling about returning to the workplace by answering a question.

Workplace Care Management Dashboard

- Overview tab - provides overall visibility into key metrics and trends related to employee cases
- Investigating tab - provides a detailed view of active cases being investigated with a set of key metrics important for that stage
- Monitoring tab - focuses on active cases in monitoring stage.

Licensing & Next Steps

From a licensing perspective, to get up and running with the Return to the Workplace applications, you will require:

- Power Apps license
- Power BI Premium or Power BI Pro license (for making use of the Power BI dashboards)

Interested? Engage with the team in the Microsoft Business Applications division of DXC Technology to help you define your exact business requirements and then work with you to implement the optimum Return to the Workplace solution to meet your organisation's unique needs.

About DXC Technology

DXC Technology (NYSE: DXC) helps global companies run their mission critical systems and operations while modernizing IT, optimizing data architectures, and ensuring security and scalability across public, private and hybrid clouds.
