Challenges
Business wants rapid change
Traditional app developments too costly
Off-the-shelf solutions don't fit
In-house expertise lacking

Transform business processes quickly using Microsoft technology

What do you want to achieve?

There are almost limitless possibilities when it comes to creating custom business applications using Microsoft technology. Maybe you want to improve the efficiency of mobile sales teams by allowing them to access data on their laptops. Perhaps you want to capture data more effectively in the field using smartphones, or share data with partners and customers over the web to improve customer service.

The challenge inevitably is not what to build – but how to build it. Even with the versatility of Microsoft solutions, custom app developments can be too complex for in-house teams. You probably can't justify the cost and time of a traditional software development, but you appreciate that your business needs can't be met with an off-the-shelf product or standard software-as-a-service offering. You also want to ensure that your new app integrates seamlessly with your existing Microsoft and line-of-business systems – and you'd like to be able to start using it within weeks.

How can eBECS help?

Drawing on our long experience as a Microsoft partner, eBECS has developed and proven a new approach to app development that significantly accelerates the time to value. Within a typical project timescale of just five weeks, we will create a custom business app to meet your precise requirements, using Microsoft technologies.

The benefits

The eBECS FastApps service will enable you to:

- Gain a faster time to value, by significantly accelerating all aspects of the project from planning to training

- Ensure your new app precisely delivers the capabilities and integrations your business needs, by working with Microsoft experts

- Maximise the value you gain from your existing investment in Microsoft technology by joining up gaps in systems with bespoke apps

- Learn the skills to manage and maintain your app in-house to reduce your future reliance on external consultants

eBECS FastApps

Select eBECS to create business apps with intuitive design, simple interfaces and powerful capabilities

How does the FastApps service work?

The eBECS FastApps service comprises four stages, usually completed in just five weeks, depending on the size of the business:

1. Ideation workshop and proof-of-concept

For an initial start-up fee of £10,000, eBECS holds a workshop to discuss the requirements of the new business app and map the user journey. The experienced consultants then model the different processes involved in the app and create a proof-of-concept. At this stage, eBECS provides a full price for the remaining three phases.
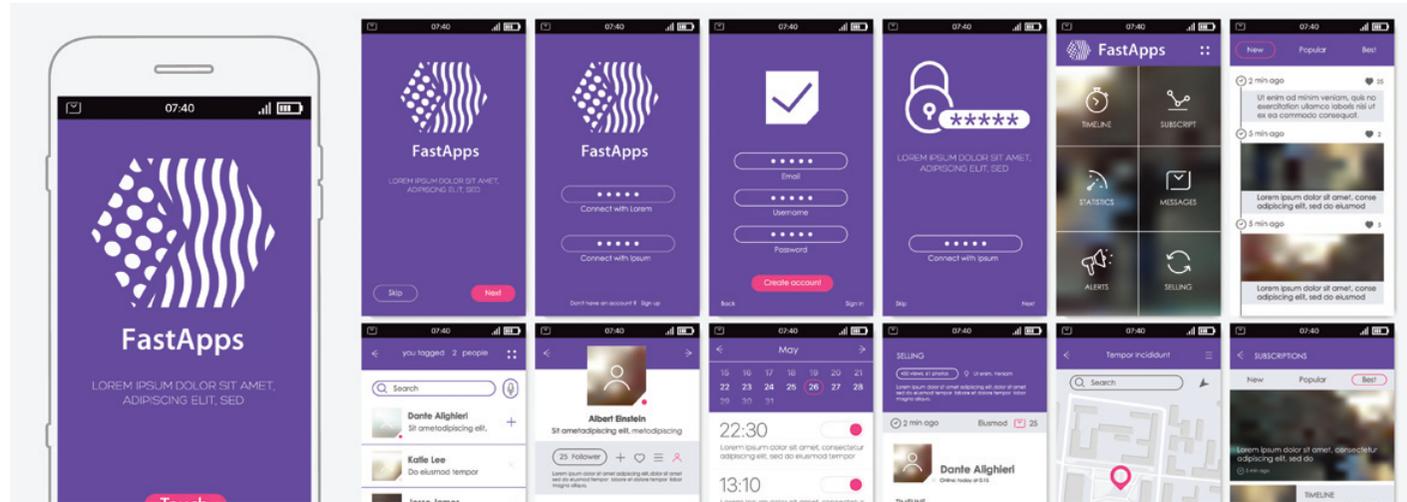

2. Production build

Working in close collaboration with in-house teams, eBECS builds the new business app, taking care to simplify the user experience and incorporate clear visualisations. In this phase, eBECS will integrate the app with existing systems to streamline workflows and improve data accessibility.

3. Deployment

Next, eBECS will deploy the app in the customer's environment. This phase is accomplished with minimal business disruption and includes post go-live support to help in-house teams respond to any user issues that might arise.

4. Handover

Finally, eBECS transitions ownership of the app to the customer. We deliver training for in-house teams and users, if required, ensuring that everyone has the necessary skills to use, manage and maintain the app in the months and years ahead.

eBECS creates custom apps by leveraging and integrating:

- Microsoft PowerApps
- Microsoft Power BI
- Microsoft Flow
- Microsoft Dynamics 365
- Microsoft Office 365 & SharePoint
- Line of business systems
- Common Data Services
- Connectors & Gateways

A Microsoft solution from a Microsoft Gold Partner

eBECS delivers its FastApps service by leveraging a suite of Microsoft solutions, including Microsoft PowerApps, Microsoft Power BI, Microsoft Dynamics 365 and Microsoft Flow. Custom apps can be designed to integrate data and processes from a wide range of enterprise systems, including other Microsoft solutions, line of business software, live data feeds, subscription services, third party databases and data services.
