

# eBECS FastInsight

Get fast insight into your business with a fast deployment of Microsoft Power BI

## Microsoft Power BI features:

**Single view of all data**

**Real-time data dashboard**

**Rich interactive reports**

**Clear data visualisations**

**Secure mobile access**

**Available to all employees**

## Reduce your Microsoft Power BI implementation from months to weeks

## Why deploy Microsoft Power BI?

From board-level directors to senior managers and sales executives, different groups of people within a business need access to accurate, meaningful information to help them make the best possible decisions – and this is exactly what Microsoft's Power BI delivers. A suite of business analytics tools, Power BI brings together real-time data from a vast range of sources and makes it accessible to employees, anytime, anywhere, in attractive reports and dashboards that everyone can understand.

eBECS has developed its FastInsight Service to help organisations take advantage of Power BI more quickly, more successfully and with more confidence. Our business insight specialists have in-depth experience of deploying Power BI, across multiple industry sectors. Working closely with your in-house teams, they will guide your deployment, set up your reports and deliver training to ensure that you are self-sufficient with Power BI in around five weeks.

## The benefits

By selecting eBECS to guide your deployment of Microsoft Power BI through the eBECS FastInsight service, you will:

- Gain a faster time to value, by significantly accelerating all aspects of the project from planning to training
- Ensure Power BI precisely delivers the insight your business needs, through eBECS' highly collaborative approach
- Improve business decision making with clear, visual reporting, customised to meet your precise requirements
- Maximise your return on investment by building on your previous BI investments
- Learn the skills to manage, enhance and maintain Power BI in-house for the future

# eBECS FastInsight

Select eBECS to ensure your investment in Microsoft Power BI is a success

## eBECS FastInsight Service features:

Needs assessment	Proof-of-concept
Production build	Dashboards & reports
System integration	Deployment
Post go-live support	Handover & training

## How does the FastInsight service work?

The eBECS FastInsight service comprises four stages, usually completed in just five weeks, depending on the size of the business:

### 1. Ideation workshop and proof-of-concept

eBECS starts by holding a workshop to enable employees from different parts of the business to brainstorm their requirements with eBECS' experts. Following this session, eBECS models the business data, defines the necessary visualisations and creates a proof-of concept.

### 2. Production build

Using an Agile project methodology, eBECS then builds the Power BI solution, based on sprints, integrating existing systems and delivering operational benefits at the end of each sprint phase. The professionals from

eBECS work very closely with in-house teams to deploy data gateways, build data models and create a range of Power BI dashboards and reports to meet business needs.

### 3. Deployment

The next step, usually taking only a couple of days, is to deploy Power BI within the customer's environment. eBECS provides two weeks of inclusive post go-live support to answer any questions that in-house teams may have and help them build their confidence with the new solution.

### 4. Handover

Finally, eBECS transitions ownership of the Power BI solution over to the customer, making sure that IT teams are happy and confident at every step. eBECS provides training for key people, passing on the skills and knowledge they will need to maintain and extend the solution in the future.

## A Microsoft solution from a Microsoft Gold Partner

eBECS delivers its FastInsight service using Microsoft's Power BI service-as-a-subscription service. Virtually all enterprise data can be integrated into the solution, including data from other Microsoft solutions, live data feeds, line of business apps, subscription services, third party databases and data services.
